

ShineWrite 留学文书原创写作服务 - 问答式个人陈述

您需要认真完成由 ShineWrite.com 的招生咨询顾问设计的素材表格，我们的编辑将整理、分析利用这些数据为您撰写独一无二的留学文书。

如果您需要在文章结构或者布局上和我们的编辑深入讨论，我们**强烈推荐**您提供一个简单的英文初稿，使用我们的**互动修改服务**。（<http://www.shinewrite.com/s3.asp>），互动修改服务比写作服务更加经济，而且客户满意度更高（达到 99.6%）。

对于原创写作服务：我们帮助您将自己的资历和背景清晰地表达出来，以给招生委员会留下深刻的印象。该项服务特别适合工作以及**学业繁忙而无暇**完成留学文书写作的申请者。我们的留学文书绝不使用模版写作，所有的申请文章都将独家使用世界权威的防止剽窃数据 Turnitin.com 的检测来最终确保留学文书的唯一原创性。

您可以放心，我们严格控制品质和时间进度，您在 5-7 天左右（其他公司一般为 10 个工作日，大约为 15 个自然日）便可以收到**包含我们编辑写作思路**（独家提供）的稿件。

您可以在接下来的 10 天内认真研读稿件。收到初稿后，每份文件都可以统一提出 1-2 次修改建议，我们会继续安排资深编辑为您免费服务。

下面是我们撰写的一份**个人陈述**。和其他公司的服务不同，您会发现我们的编辑在文章开始便提到自己**独一无二的创作思路**，并附上写作的稿件。

-----**样例**-----

创作思路和终稿样例：

Dear Client,

This task has certainly presented itself as a very challenging one as you have essentially left the composition and research work to your editors. However, we are proud to say that we have come up with two essays that are distinct yet, complementary to each other. In both essays, you will notice that we have taken the time to give sufficient background as the reader may not be that familiar with the Chinese situation.

In the first essay, since you only provided us an idea to expound upon, we have conducted some research and came up with an essay about a topic you find

interesting within the field of SCM. Based on experience, we noticed that most students such as yourself mainly plan to go back to China and apply what they have learned in their respective homelands. In coming up with the central topic for your first essay, we assumed that you would want to pursue one that would improve existing systems in your country. We hope to have made the right assumption. In the excerpts below, we present the main ideas of your first essay.

“...I believe that given the right solutions specifically developed for the Chinese context, the country will be able to retain its place as one of the fast-rising economic powerhouse of the global economy.” (Par.2)

“...Thus, as one part of a comprehensive solution, more sophisticated and effective methods to streamline and improve the storage and transportation problems of Chinese manufacturers are needed...” (Par.3)

“Given this background, I would be interested in exploring third-party logistics support, mainly through Internet-based solutions, that will suit Chinese sensibilities. I plan to conduct a reach exploring the feasibility of applying and modifying a successful third-party logistics solution in a particular industry in China.” (Par.4)

For essay 2, we also developed it to present the data you have given as your own achievement because the instructions said that it should explicitly show your own achievement, concept, or idea. In the excerpts below, notice how we have presented the positive qualities of such an achievement.

“I entered this competition by introducing a novel online inspection system which aimed to improve and increase efficiency levels...” (Par.3)

“...The online enterprises declaration system was eventually developed and adopted by the Chongqing Municipal Industry and Commerce Bureau, and in the conclusion of last year’s pilot experience, manufacturers saw savings of up to 100 million Yuan in administrative costs. Moreover, one additional advantage of this system is that it also avoids illegal transactions within the bureau, should there be any.” (Par.3)

“This idea was hailed as a one that effectively utilized information technology to save time and effort. It has also been seen to be in line with the city government’s mission toward service development and effective governance.” (Par.4)

We believe that you will find our compositions and comments helpful. Please read the essays carefully and check the accuracy of information hereby presented.

From our experience, essays like these are usually included in applications for

admission not just to measure how much you know but how you think and how you present your ideas. In fact, inserting references in the essay is not absolutely required and is, in fact, inappropriate, as it is not an academic paper. In our opinion, it is enough that you have mentioned information in reference to your previous experiences. Of course, we need not mention the fact that inserting more words will gravely affect the word-count.

Furthermore, we hope that you are not under the impression that we ignored your instructions. You may refer to the following excerpts as to how we have managed to include references from previous work experience, readings, courses, etc., despite the fact that we were not supplied any information toward that end.

"However, given the information that we have learned in school and from other media, I would have to say that cost competitiveness alone will not be sufficient to guarantee further success." (Par.1)

"In school, we have learned about integrated logistics services but sadly, this is still a new concept in China." (Par.1)

"In recent years, more and more options are being explored for better supply chain management, and from my research, I have gathered that one of the crucial elements to effect the rapid growth of the logistics industry include the development of more effective solutions for storage and faster transportation of products ." (Par.3)

Good luck!

Your editor,
ShineWrite.com
We serve with care and joy

Question 1:

Please choose an area or topic in supply chain management or logistics that interests you and describe the research you would like to be a part of or see done. Feel free to cite examples from work experience, readings, previous courses, etc.

461 words

In the field of international economics, most experts agree that China is fast becoming an economic and production powerhouse. Due to its growing population, our country has become one of the leading markets not just in consumption, but also in the production of consumer goods. It is also because of this growing population that the country has earned for itself a place in the world of production as a primary source of cheap labor, making China-made products competitive in the market. However, in a dynamic global economy, traditional means of production and implementation of supply chain management to transport its products may not be enough as the country struggles to keep up with its international competitors. Moreover, as China has begun to take steps to liberalize its domestic and international market, the country has come to attract more and more local and foreign players to compete. Traditionally, maintaining low prices has been a distinct Chinese advantage. However, given the information that we have learned in school and from other media, **I would have to say that cost competitiveness alone will not be sufficient to guarantee further success.**

Due to the complicated situation of its economic activities being inextricably tied up with its political and cultural system, however, the field of logistics and supply chain management has not taken off the way it has in western countries. I believe that given the right solutions specifically developed for the Chinese context, the country will be able to retain its place as one of the fast-rising economic powerhouse of the global economy.

At present, **there is little integration in the provision of logistics services in China**, and most companies participate in one or a few of the sub-sectors, rather than provide a comprehensive service for the whole system. In school, we have learned about integrated logistics services but sadly, this is still a new concept in China. In recent years, more and more options are being explored for better supply chain management, and from my research, I have gathered that one of the crucial elements to effect the rapid growth of the logistics industry include the development of more effective solutions for storage and faster transportation of products. Thus, as one part of a comprehensive solution, more sophisticated and effective methods to streamline and improve the storage and transportation problems of Chinese manufacturers are needed. Finding the right solutions will be most beneficial to the Chinese market which already sees its exports soar to 20% of its current GDP.

Given this background, **I would be interested in exploring third-party logistics support**, mainly through Internet-based solutions, that will suit Chinese sensibilities. I plan to conduct a reach exploring the feasibility of applying and modifying a successful third-party logistics solution in a particular industry in China.

Question 2:

Please provide an example of a time when you introduced a new, innovative idea as a member of a group, organization or company. Discuss how your idea was then carried out and how it affected change within that group, organization or company.

378 words

Chongqing City is the largest of China's provincial-level municipalities, and is a major hub of economic activity, with a trading inland port which transports goods from the southwestern provinces to eastern China. The city's primary source of income is its rich base of natural resources as well as the rapidly expanding industries the city government has nurtured over the years. Industries such as auto parts, chemicals, mining, textiles, electronics, building materials, machinery, food processing, and building materials have enjoyed government support. In fact, it has made heavy investments in the city's infrastructures in its bid to make the city China's "Gateway to the West".

Alongside the rapid economic growth and increasing foreign investments, local manufacturers have struggled to maintain competitiveness in a very fierce environment. To help these manufacturers, the city government has launched a competition to develop and utilize local innovations to improve overall management.

I entered this competition by introducing a novel online inspection system which aimed to improve and increase efficiency levels. Basically, the inspection system would automatically send messages to inform enterprises. Then, these enterprises would print the inspection report, conduct the inspection, and then submit the form online. The system therefore simplified and speeded up what used to be a long, laborious process of endless inspections, filling up of forms, falling in line, and submitting reports. With the new system, submitting reports and correspondences between the bureau and the enterprises can now be conducted online- enterprise representatives no longer have to fall in line and the work pressure of the bureau's staff is also greatly reduced. Moreover, whereas enterprise staff used to take as long as four months to pass inspection reports, this process now takes minutes. The online enterprises declaration system was eventually developed and adopted by the Chongqing Municipal Industry and Commerce Bureau, and in the conclusion of last year's pilot experience, manufacturers saw savings of up to 100 million Yuan in administrative costs. Moreover, one additional advantage of this system is that it also avoids illegal transactions within the bureau, should there be any.

This idea was hailed as one that effectively utilized information technology to save time and effort. It has also been seen to be in line with the city government's mission toward service development and effective governance.
